The following comparison between the receipts, expenditures, applications filed, issues of the Office, the printed copies sold, copies of records furnished, and the number of employees for the years ended, respectively, December 31, 1899, and December 31, 1907, illustrates the growth of the business of the Patent Office:

SUMMARY OF TABLES.

In 1907 there were received 57,679 applications for mechanical patents, 896 applications for design patents, 187 applications for reissues of patents, 7,722 applications for registration of trade-marks, 1,027 applications for registration of labels, and 403 applications for registration of prints. There were 36,469 patents issued, including designs, 151 patents reissued, and 7,878 trade-marks, 667 labels, and 315 prints registered. The number of patents that expired was 25,322. The number of allowed applications awaiting the payment of final fees was 11,102, and the number forfeited for non-payment of the final fees 5,541. The total receipts were \$1,910,618.14, the expenditures \$1,631,458.36, and the surplus of receipts over expenditures \$279,159.78. The total balance to the credit of the Patent Office in the Treasury of the United States on January 1, 1908, was \$6,706,181.64.

In proportion to population more patents were issued to citizens of the District of Columbia than to those of any State—1 to every 941. Next in order are the following: Connecticut, 1 to every 987; Nevada, 1 to

every 1,085; California, 1 to every 1,128; Colorado, 1 to every 1,173; New Jersey, 1 to every 1,252; Washington, 1 to every 1,263; Massachusetts, 1 to every 1,327; Illinois, 1 to every 1,388; New York, 1 to every 1,389; Rhode Island, 1 to every 1,581; Ohio, 1 to every 1,667; Pennsylvania, 1 to every 1,815; Oregon, 1 to every 1,888; Montana, 1 to every 2,062; Idaho, 1 to every 2,128; Michigan, 1 to every 2,190; North Dakota, 1 to every 2,381; Oklahoma, 1 to every 2,690; Wisconsin, 1 to every 2,729; Indiana, 1 to every 2,732; Utah, 1 to every 2,740; Missouri, 1 to every 2,749; Minnesota, 1 to every 2,928; Maryland, 1 to every 3,107; Kansas, 1 to every 3,113; South Dakota, 1 to every 3,161; Arizona, 1 to every 3,235; Nebraska, 1 to every 3,267; Iowa, 1 to every 3,285; New Hampshire, 1 to every 3,401; Vermont, 1 to every 3,656; Maine, 1 to every 3,901; West Virginia, 1 to every 4,045; Delaware, 1 to every 4,198; Wyoming, 1 to every 4,206; Florida, 1 to every 4,761; Texas, 1 to every 5,604; Indian Territory, 1 to every 6,589; Virginia, 1 to every 6,767; New Mexico, 1 to every 7,233; Kentucky, 1 to every 8,063; Georgia, 1 to every 8,395; Louisiana, 1 to every

8,635; Tennessee, 1 to every 8,709; Arkansas, 1 to every 8,743; Alaska, 1 to every 9,063; Hawaii, 1 to every 9,625. The fewest patents granted in proportion to the number of inhabitants were in the following States: South Carolina, 1 to every 26,302; Mississippi, 1 to every 14,363; North Carolina, 1 to every 12,377, and Alabama, 1 to every 11,722.

As to foreign patents, 1,182 were granted to citizens of Germany; 868 to those of England; 536 to those of Canada; 334 to those of France; 127 to those of Austria-Hungary; 121 to those of Switzerland; 77 to those of Sweden; 62 to those of Scotland; 58 to those of Belgium; 51 to those of Victoria; 48 to those of Italy; 45 to those of New Zealand; 40 to those of Denmark; 34 to those of New South Wales; 33 each to those of Russia and Transvaal; 26 to those of Mexico; 23 to those of the Netherlands; 22 to those of Ireland; 21 to those of Cuba; 15 to those of Norway; 12 to those of Argentina; 11 to those of Spain; 9 to those of Japan; 7 each to those of Cape Colony, Tasmania, and Western Australia; 6 each to those of Brazil, Newfoundland, and Queensland; 5 each to those of India and Venezuela; 4 each to those of Luxemburg and South Australia; 3 to those of Turkey; 2 each to those of Haiti, Jamaica, Peru, Portugal, and Roumania; 1 each to those of Algeria, Colombia, Costa Rica, Ecuador, Guatemala, Java, Nicaragua, and Rhodesia.

THE PRESENT CONDITION OF THE PATENT OFFICE.

Since assuming the duties of Commissioner of Patents on June 1, 1907, and in the seven months of my incumbency, I have carefully studied the conditions existing in the various branches of the Bureau with a view to ascertaining what changes were necessary to better the conditions thereof generally in the interests of the inventors, manufacturers, and all those having business before it.

I have learned that very material changes are called for in the internal administration thereof, and much needed relief should be granted by Congress in certain respects. I will recite in part in this report the recommendations for relief that I have already made to Hon. James Rudolph Garfield, Secretary of the Interior. The Secretary has granted all my requests for assistance and relief, so far as was within his power, except matters requiring additional legislation by Congress, in order to bring this Bureau up to a high standard of working efficiency.

ADDITIONAL ROOM.

The additional room assigned this Office by the Secretary in June last has resulted in a vast improvement of the Office in that respect. I have been able to utilize this additional space in expanding the various divisions, and thereby relieving the very congested conditions of nearly the whole Bureau. The administrative and judicial tribunals have been brought together in one corridor of the same floor, the Commissioner, Assistant Commissioner, Chief Clerk, Examiner of Interferences, and Board of Examiners-in-Chief, all being so located that they are accessible and convenient to all persons having business before them. This has made it possible to dispense with one docket clerk and his force and to establish a docket room common to all appellate

tribunals. It has been possible also by this change to furnish two anterooms for the use of attorneys whose causes are on call before the Commissioner, Assistant Commissioner, and the Board of Examiners-in-Chief, and to afford them means to consult clients and examine the records in their cases before hearings. The use of these two ante or waiting rooms for inventors and attorneys also prevents inventors and attorneys from hearing the secret inventions being disclosed by attorneys presenting their particular cases before these tribunals, and thereby guards against the possibility of inventions being imparted to others before patents issue. This change in the manner of hearings has given great satisfaction to all having cases on appeal before the various tribunals of the Office. The additional room furnished, however, will not be sufficient for the needs of this Office for more than a short period. Additional space will be required in the near future, probably in about a year, and I would suggest that some action be taken during the present session to meet the needs as to more space. Permit me to recommend, therefore, that the branch printing office in the basement of the Ninth street wing be moved to the Government Printing Office. That would result in making available a tier of rooms from F to G streets that would furnish a proper housing for about fifty clerks. The basement of the other three sides of the building should be remodeled to harmonize with the Ninth street front. This could be accomplished by lowering the floors of the other three corridors of the building, cutting down the court to the corridor levels, and sinking the outside plots and terraces below the level of the street. This would afford ample light and ventilation to all the basement rooms. By this change the great dampness, which is caused by the water in the earth of the court and terraces percolating through the retaining walls, would be obviated. Modern granolithic sidewalks should be provided around the entire building, which would furnish storage room beneath for copies of patents for a great many years, and this space beneath the sidewalks would be dry, light, and well ventilated by reason of the sunken plots of ground between the main building and the walks. The question of storage room for copies of patents is a serious one at this time; and as about two hundred linear feet of space is required weekly to house the weekly issue of patents, which consists of one hundred copies each of eight hundred patents, it is imperative that some relief be afforded as soon as practicable. The present third floor and galleries should be relieved of the great weight of copies of patents and other records now placed thereon by changing them to the basement floor or under the suggested new sidewalks. The upper northwest corner wall of the building is already cracked, caused by former excessive weight of material having been placed there. I would suggest, also, that additional rooms be constructed between the third-story floors, known as the model halls, and the ceilings of said halls, as those halls since the removal of the models therefrom no longer need such high ceilings, and a great amount of valuable space is wasted. These changes would furnish excellent light and commodious space without great cost, compared with the expense of erecting a new building. If these changes are not deemed desirable, I would respectfully recom-

mend that a new building be provided in which the Patent Office may be housed. This new building could be paid for entirely out of the surplus in the Treasury to the credit of the Patent Office, which on January 1, 1908, was \$6,706,181.64. This surplus of the net receipts over all expenditures has been derived entirely from the fees paid by the inventors of the country, directly or indirectly.

CONDITION OF THE WORK.

The work has been for years very much in arrears and is in the same condition at this time. This has been found to be caused, first, mainly by the insufficient force of examiners and clerks to meet the great volume of work coming in, a large increase yearly, which yearly increase is not always capable of being estimated in advance, so that the same arrearage of work has existed each year for many years. The examining corps of the Office has repeatedly worked until 5 o'clock, even when the official day closed at 4 o'clock, for many years, and they have been called upon several times to work later than this hour and have frequently forfeited a part or all of their annual leaves for the purpose of bringing up their work in order that a good showing might be made before Congress met. Their efforts under these conditions were at best spasmodic, and simply resulted in thousands of actions being made which were nothing more than frivolous. After one of these annual efforts it was necessary to do a great portion of that work all over again, and it really had the effect of throwing the business of examination of applications further back than ever. This resulted not only in vexatious delays to the inventors, but it caused hundreds of complaints to be filed, and, what was still more embarrassing and serious, a great many applications were passed to issue that were not ready for patent, with the result that the inventors and owners of meritorious inventions forfeited valuable rights by these careless, ill-considered, and hasty actions on the part of the Office. The inventors are entitled to be protected as well as the public, and they should always be helped by the Office in all legitimate ways. The inventors pay the Government for the work to be done in the examination and issue of their patents, even though they appeal their cases in regular order to all the tribunals of this Office and finally to the United States Court of Appeals of the District of Columbia, for a fee is charged for each appeal in addition to the Government fee of \$35. Complaints against the conduct of affairs in this Office have been numerous, and many have been based upon good and sufficient grounds. The affairs of the Office should be so conducted that very few, if any, just complaints could be lodged. In view, therefore, of the great amount of accumulated work and the great volume of work that is constantly coming in, increasing each year and keeping pace with the growth of the country and the activities of manufactures and commerce, I am most decidedly of the opinion that the present force cannot cope with it. I have, therefore, after a most careful investigation of the Office needs in this respect, asked for a sufficient number of examiners and clerks to bring the arrearages up to date and to dispose of the great amount of incoming work material. If the force asked for be

granted and made immediately available, I believe that the accumulated work can be disposed of, and that it will be possible in the future for the average inventor's application to be acted upon, either rejected or a patent allowed, within thirty days of its receipt. The inventors are entitled to prompt action, and they should be accorded it.

CLASSIFICATION OF PATENTS.

An increase of force is also badly needed for carrying forward the work of classification, which was commenced by the organization of the Classification Division in November, 1898. A force was appropriated for by Congress for this purpose; but the work of the examining divisions increased at such a rate that only a small part of it was ever assigned to the work of classification, and even that was transferred so frequently and lost so soon by resignations that the work has only been carried on slowly and with great difficulty.

The number of United States patents issued to December 31, 1907, is 875,678; reissues of patents, 12,737; design patents, 38,979; trade-marks registered, 66,891; labels registered, 13,963, and prints 2,188. There are also about 3,000,000 foreign patents of all countries, which are obtained by exchange with the countries belonging to the International Union for the Protection of Industrial Property. The number of patents, both domestic and foreign, is now so vast and is growing so rapidly, and the field of search to determine novelty and validity by the examiners, attorneys, and inventors is so extensive, that the classification of this material should be rapidly pushed to completion. A complete classification of these 3,875,000 patents would result in lessening the time of search about 50 per cent., and the future increase in the Office force would be very slight compared with the subsequent volume of work received, owing to this complete classification. The salvation of the search system, which is the distinguishing feature of the United States patent laws, lies in the carrying out of a proper plan of classification. Without it, it has been frequently predicted that the system will soon fall of its own weight. This work should be pushed as rapidly as possible on account of the constant changes in the lines of development and the frequent losses of force, which result in a great waste of time and labor. To illustrate this fact, reference is made to the class of telegraphy, which was taken into the Classification Division for reclassification. The patents in this class are largely diagrammatic, and most of them must be read in order to understand them. A second assistant examiner at \$1,600 a year was assigned to this work and spent about one year in reading them and then resigned. He was succeeded by another man of the same grade, who worked about the same length of time and also resigned. A third man was then set to work, but remained only a month before handing in his resignation, after which the class was returned to the attorneys' room, as there was no one left to attempt it. Here was \$3,200 paid for the acquirement of the necessary knowledge of this art, which knowledge was lost to the Office by the resignation of the men, due to insufficient salaries to retain them. This is only one example of what is occurring to a greater or less extent in all the forty-one examining

divisions. I purpose assigning a portion of the examining force asked for in the estimates to the work of classification, and also to establish a complete third set of foreign patents for the use of attorneys, inventors, and manufacturers, as well as to perfect the present search classes of patents, both in the attorneys' search room and the examining divisions. By a system of numbering each copy of the patents consecutively the absence of any patent will be at once known and the classes may be kept complete.

ESTIMATES FOR FORCE AND SALARIES.

In the estimates furnished for appropriations for the Patent Office for the fiscal year ending June 30, 1909, and in my letter accompanying the same, I have stated in part that I recommend that the salary of the Commissioner of Patents be raised to \$6,000 a year, the salary of the Assistant Commissioner to \$4,500 a year, the salary of the Examiners-in-Chief to \$4,000 a year each. I desire to say in connection with these positions that the salary of the Commissioner has been changed but once since 1836. The position of Assistant Commissioner of Patents was established in 1870 with a salary of \$3,000 a year. This salary has never been raised. This is the poorest paid Assistant Commissioner in the service of the Government. His duties, like those of the Commissioner, are largely judicial. The Board of Examiners-in-Chief was established in 1861, with salaries fixed at \$3,000 a year, the same that they are now receiving. These men are required by statute to possess sufficient legal and technical knowledge to perform the duties of the position, which are wholly judicial. They are appointed by the President and confirmed by the Senate. From the decisions of the Commissioner and of the Assistant Commissioner appeal lies to the United States Court of Appeals of the District of Columbia. I may say here, to show in part the importance of these positions, that one-half, or fifty per cent., of the business of that court is now taken up with appeals, both *ex parte* and *inter partes*, from the Commissioner of Patents.

I have asked for forty-five Principal Examiners (one of whom shall act as Chief Clerk, another as Examiner of Interferences, another as Examiner of Classification, and another as Examiner of Trade-Marks and Designs, and while so acting each shall receive \$600 additional compensation) at \$3,000 a year each. In my opinion all these positions, including that of Chief Clerk, should be interchangeable in the interests of good administration. The Chief Clerk should be detailed from the Principal Examiners, and he should be a graduate of law, (as nearly all the Principal Examiners are,) for a greater portion of the duties of this position calls for a man of very extended experience in this Office. A great many legal questions arise in the correspondence of the Office which the Chief Clerk is called upon to answer, and almost all of the correspondence can be attended to by him without reference to the examining divisions of the Office, thereby saving a great deal of time, not only for himself, but for the examiners. This arrangement would banish the friction between the Chief Clerk and the examining corps, which has existed for a long time.

I have asked for two Law Examiners at \$3,000 a year each, in place of two law clerks at \$2,500 a year each,

an increase of \$500 a year each. The Law Examiners have been educated in the examining corps, and the present incumbents are, and their successors should be, law graduates both in general and patent law.

I have asked for sixty Examiners at \$2,700 a year each, seventy Examiners at \$2,400 a year each, eighty Examiners at \$2,100 a year each, sixty Examiners at \$1,800 a year each, and fifty Examiners at \$1,500 a year each, a total increase of forty-nine Examiners, including one Principal Examiner.

I have asked for an increase of three clerks of class four and three clerks of class three.

I have asked for an increase of thirty clerks of class one. These are needed for examining divisions where the duties are of a somewhat technical nature. The incompetency of a portion of the clerks in the examining and other divisions is in a measure responsible for the backward condition of the work. Although this is a small salary for this class of work, I think a sufficient number of clerks could be obtained at this salary to fill these positions.

I have asked for one hundred clerks at \$1,000 a year each, in lieu of sixty-two clerks at \$1,000 and ten clerks at \$800 a year each. This is an increase of twenty-eight clerks at \$1,000 a year each. I make this recommendation for the reason that the Office is much hampered in its work by resignations and transfers, owing to the low salaries paid a large part of its clerical force. The clerical work is of much higher order than that of most bureaus under the Government. It takes a clerk a long time to become efficient, as a high order of ability and technical knowledge is required of the clerical force throughout the Office, owing to the peculiar duties to be performed in all branches of the work in the Bureau, which includes, among other things, knowledge of technical terms and knowledge of the law of assignments, as all assignments of patents are recorded in this Office.

These increases recommended in the salaries are found to be necessary in order to retain the men already in the examining corps and to induce other competent men to enter the service and fill vacancies now existing and that may occur. The Civil Service Commission has been unable to fill the vacancies that have existed from time to time from 1902 down to date, and I quote their letter of September 5, 1907:

In response to your request of August 31, there is submitted herewith a statement showing the number of eligibles secured annually for the position of patent examiner since the year 1902, and years in which all these eligibles were used by your Office.

By direction of the Commission.

Very respectfully,

HENRY F. GREENE,
Commissioner.

Assistant examiner, Patent Office: Eligibles entered during 1902, on register, 72; 1903, 10; 1904, 34; 1905, 32; 1906, 24.

These eligibles were all appointed and the registers in every case became exhausted, and the Commissioner of Patents was called upon to go into the "open market," as it were, and get the best material he could find to fill the vacancies. Several examinations were held during all these years. In 1906 there were six examinations held, which did not produce men enough to fill the vacancies, and at this date there are no eligibles on the register of the Civil Service Commission, and I doubt if any could be had if a special examination for Fourth Assistant Examiners should be held. The

standard of the examinations has been much lowered, as it was thought that possibly they had been too difficult; but this did not improve the situation, and even many of those that passed declined appointments when they learned that the entrance and other salaries were so low. In order to obtain competent men, these examinations must be and are highly technical in character, but not more difficult than is necessary to secure men of ability to perform the technical work connected with the examination of applications which relate to all of the known arts. The subjects covered by the examinations are higher mathematics, physics, technics, chemistry, (organic and inorganic,) reading and describing mechanical drawings, and French and German. The last two subjects are necessary in order to secure men who can read specifications of foreign patents. The examiners are all graduates of colleges, mostly polytechnic colleges, and ninety per cent. have been graduated in general and patent law, and with office experience are invaluable to the service; but after about three years' service in this Office and when they are fully experienced and valuable in the work thereof they are also fully equipped to go out, and do go out to accept positions that pay all the way from \$2,000 a year up. The Office has become merely a post graduate school for the technical and legal education of young college men who enter the service. The General Electric Company has in its patent department twelve or more men who were formerly Examiners in this Office, and other corporations have taken hundreds from this Office, and this company also, like many others, takes men from the graduating classes of polytechnic colleges at higher salaries than are provided on entrance to this Office, so that we are now competing with outside institutions for men to do the technical work of the Office. One hundred and thirty-five examiners out of a corps of three hundred have resigned in a period of less than five years. The salaries paid Principal Examiners in the Patent Office are the same that were fixed by the act of 1848 and are the same salaries that were provided for United States district judges and members of Congress at that date.

I most strongly urge that all the estimates submitted be allowed. They have been very carefully prepared, and I can say, after an experience of twenty-four years in this Bureau, that all that has been asked is badly needed. I think that with this increase of force of forty-nine examiners and forty-seven clerks I shall be fully able to bring the work up to date and to put this Bureau on a business basis within twelve months, provided the additional force and salaries be made immediately available, for the present condition is such that relief should be furnished before July 1, 1908. The fees of inventors support the Bureau, and out of the receipts every item of expense for its maintenance is paid, including salaries of the force employed.

At the last session of Congress the Committee on Patents of the House of Representatives gave hearings to the Inventors' Congress, the Manufacturers' Association of the United States, and the Patent Bar Association in the interest of bettering the conditions that have existed for years in the Patent Office. As a result of these hearings, the Committee on Patents unanimously reported House Bill 22678, with accompanying report and the printed hearings, which provided salaries larger than are recommended in my present estimates. This bill did not come up for passage, owing to lack of time, occasioned by a short session.

EXHAUSTED COPIES OF PATENTS.

A large number of copies of patents has been exhausted for some time, and this condition has been the cause of numerous complaints from inventors, attorneys, the courts, and persons generally having business with this Office. I have had many hundreds reproduced and have given directions that all exhausted copies of patents be reproduced as speedily as possible. This has had the effect of lessening the number of complaints arising from this cause. Some delay has been occasioned by the inability of the present contractor to get out the reproductions of patents as promptly as desired, but this condition will be removed in a short time.

I have caused to be shipped to the office of the Public Printer from the basement storerooms 9,498 sacks of old reports and records of various kinds that have been stored in those rooms for a great many years, and it is my intention to empty the remaining rooms of the material of this kind. The additional space thus gained is being used to house the copies of the current issues as they come out, but all of these rooms will not be suitable for the storage of these copies by reason of the dampness existing there, which, as above indicated in this report, is caused by the damp earth of the court which these rooms abut.

APPEALS.

Accompanying this report I submit for the consideration of Congress proposed amendments to the law relating to appeals in this Office.

Under the present patent law appeal lies in *ex parte* cases from a Primary Examiner to the Board of Examiners-in-Chief, thence to the Commissioner, (or Assistant Commissioner,) and from his decision to the

Court of Appeals of the District of Columbia, and in interference cases the course of appeals from decisions of the Examiner of Interferences is the same, there being three appeals in each case.

The purpose of the proposed amendment to the statute is to shorten the course of prosecution by the elimination of one of the appeals within the Office. This is designed to be accomplished by combining the Commissioner, Assistant Commissioner, and Examiners-in-Chief into a single appellate tribunal, any three of whom shall constitute a quorum, to which all appeals shall lie, whether from a Primary Examiner or from the Examiner of Interferences, and from which appeals would lie to the Court of Appeals of the District of Columbia.

The present course of appeals is not well adapted to the volume of business which the Office is now called upon to handle, for the following reasons:

1. It imposes on applicants an unnecessary amount of delay and expense. The very purpose of the patent system is to place at the service of the public at as early a date as practicable inventions as they are made, and unnecessary delays affect not only applicants, but all interested in the industries to which the inventions relate. One appeal within the Office, together with the appeal to the Court of Appeals of the District of Columbia, would seem to be ample, especially in view of the fact that in a suit on a patent a single appeal takes the case from the trial court to the Court of Appeals. The elimination of one appeal would materially shorten the time required for the ultimate disposal of appealed cases and effect a considerable saving of expense to applicants.

2. Section 4910 provides for an appeal to the Commissioner *in person* from the Board of Examiners-in-Chief. The work of the Office and the consequent number of appeals have increased to such an extent that it has become difficult, and will soon be impossible, for the Commissioner to give to each case the amount of personal attention proper to its disposal.

3. The Board of Examiners-in-Chief as at present constituted consists of three members, and no provision is made under the present law to supply a temporary vacancy caused by the sickness or absence from other cause of any of the members. The absence of one member often results in an evenly divided Board, with the consequent necessity for a rehearing, and the absence of two members causes an entire suspension of business. With the proposed membership of five, the presence of a quorum of three would be practically assured at all times, which has not been the case in numerous instances in the past, owing to frequent absences of a member of the Board on account of periods of illness of greater or less duration and also by reason of annual leave and other causes.

I also submit a proposed amendment to the laws relating to appeals in cases relating to trade-marks.

The existing trade-mark law provides for appeals from the Examiner of Trade-Marks and from the Examiner of Interferences in trade-mark cases directly to the Commissioner (or Assistant Commissioner). From these tribunals appeal lies to the Court of Appeals of the District of Columbia, as in patent cases. The amendment submitted merely substitutes the proposed Board of Appeals for the Commissioner as the appellate tribunal of the Office in cases relating to trade-marks, making the course of appeals in this class of cases conform to the course of appeals recommended above in cases involving applications for patents.

These changes in the course of appeals would not only have the effect of expediting the prosecution of applications on appeal, but would be a saving to the inventors of one appeal fee, the attorneys' fees, and other expenses incident thereto. Furthermore, having but one appeal within the Office in lieu of two would result in giving greater stability to the decisions of the Office tribunals, and would also obviate any want of comity that has existed in the past between the decisions of the Commissioner of Patents and the Assistant Commissioner. These proposed changes in the law in no wise affect the present legal status of the Commissioner of Patents, the Assistant Commissioner of Patents, or the Examiners-in-Chief.

THE BUSINESS OF THE PATENT OFFICE FROM 1836 TO 1907, INCLUSIVE.

I submit herein tables which show a comparative statement of the business of the Patent Office since the enactment of the statute of 1836 down to and including the year 1907. These tables show the number of applications, caveats, reissues, cash receipts and expenditures, and the surplus of each year for said period. It may be interesting to note that during the year of the so-called panic of 1837 and the years following down to 1841 there was in three years of that period no surplus, and in two years of that time the surplus was very slight. During the general business depression of 1856-7 there was no surplus, and during the year 1860, immediately preceding the civil war, the surplus dropped from \$35,663.74 of the preceding year to \$3,531.79. In the year 1861, from the time of the breaking out of hostilities, the business fell off nearly one-half, and there was no surplus that year. During the year 1862 the business increased quite largely owing to inventions in the various arts which were demanded by the needs of said war. The surplus that year was \$32,944.06. At the conclusion of this war in 1865 and 1866 the business of this Office was more than doubled, and the latter year showed a surplus of receipts over expenditures of \$133,941.10. Coming down to the business depres-

sion of 1873, the business of the Office materially fell off, with the result that the surplus was only \$12,000. The year following, 1874, by reason of the recovery somewhat from the depression, the surplus shown is \$58,979.76. The surplus during the year of the depression of 1884 was \$105,000, while the surplus of the preceding year of 1883 was \$471,000. Owing to the unsettled commercial conditions of 1893 there was a surplus during that year of only \$101,000, while the preceding year of 1892 shows a surplus of \$175,592.

During the year 1906 the number of applications for patents was 55,471, and for 1907, 57,679, showing an increase of 2,208 applications. The number of applications for reissues of patents in 1906 was 205, in 1907, 187, a decrease of 18. The number of applications for patents for designs in 1906 was 806, in 1907, 896, an increase of 90. The total number of applications for patents, reissues, and designs in the year 1906 was 56,482 and for 1907 was 58,762, showing an increase of 2,190. The number of caveats filed in 1906 was 1,885, and in 1907, 1,967, an increase of 82. The number of applications for trade-marks filed in 1906 was 8,493, in 1907, 7,722, a decrease of 771. This decrease is owing to the fact that the new trade-mark law went into effect in April, 1905, during which year there were 16,224 marks filed for registration, the registrants taking advantage of the liberal provisions of the new law to reregister a great many of the old marks. Trade-mark applications fell off in 1906 about one-half, for 8,193 were filed in that year. In the year 1907 there was a falling off of about 600 marks, the total being 7,722. Between six and seven thousand applications for the registration of trade-marks each year will probably be about the normal number received. Applications for registrations of labels in 1906 numbered 844, in 1907, 1,027, an increase of 183. The total

number of patents granted in 1906 was 31,965, in 1907, 36,620, being a gain over 1906 of 4,655 patents. This is the largest increase in any one year from 1836 to date.

The cash receipts from all sources in 1906 were \$1,790,921.38; cash expended, \$1,554,891.20, showing a net surplus of receipts over expenditures of \$236,030.18. The cash receipts from all sources in 1907 were \$1,910,618.14, an increase over the preceding year of \$119,696.76. The total amount of expenditures for all purposes for the calendar year ending December 31, 1907, is \$1,631,458.36, which deducted from the total cash receipts of the Office for that period leaves a net surplus of \$279,159.78. The increase of the surplus of 1907 over 1906 is \$43,129.60. The total amount of surplus or net earnings of the Patent Office over all expenditures for the maintenance of this Bureau and covered into the Treasury of the United States is now \$6,706,181.64.

It will be seen, therefore, from the foregoing statement of the money receipts for the year 1907 that the alleged financial depression has had no effect whatever on the business of the Patent Office. In fact, the total volume of business of all descriptions is much larger than that of the preceding year. The business of the Patent Office has always been very sensitive to any disruption or embarrassment in the commercial world, as has always been evidenced by a great falling off of the business of the Office, as above indicated in this report. There is nothing in the past year to indicate so far as the affairs of this Office are concerned that any real depression in business or financial disquietude has existed.

Respectfully submitted.

EDWARD B. MOORE,
Commissioner of Patents.
